

Malachite Software Metrics™, quantify to manage better.

Take the higher ground®

GEM-UP CONSULTING INC.

Organizations that are in the business of developing software must manage and optimize their development lifecycle. Software development metrics are Key Performance Indicators that help managers complement their qualitative approach with a sound quantitative appraisal. Malachite Software Metrics™ is a packaged method designed to facilitate the implementation of metrics within your organization. The method includes the selection of the right indicators all the way to their analysis. Implementation of metrics is crucial to the success of serious software development organizations, used at the project and at the organizational level.

CONSULTING
Take the higher ground™

Malachite Software Metrics™

Benefits

- **A solid framework:** Do not reinvent the wheel. Our method is designed to guide you through the process of defining, collecting and using metrics.

- **Consulting:** The method is explained and supported by our consultants. Metrics will be mapped to your business needs.
- **Coverage:** The method considers all aspects of the software development economics: Product quality, development process, product management, project and organizational levels.

How is it done?

- Our consultants guide your team through the multiple-step method from start to finish. We provide educational services so that your team can be self-sufficient to implement your continuous improvement program.
- All aspects of the software develop-

ment are assessed including productivity, product quality, time to market, operational efficiency, project management, in-process quality.

What is in it for you ?

- Obtaining a true picture of your efficiency, with an honest and impartial method, set up your organization in the best conditions to implement improvement programs.
- Creating work units based on industry standards give your organization the ability to benchmark against others.
- Our method is business-driven, the results are understandable by all stakeholders of the software development process.
- Key Performance Indicators (KPI) and balance scorecards are essential management tools that help drive the team performance and the bottom-line.
